

Office Collins Everett Supercenter

LOCATION

Everett, WA

SERVICES

Interior Design, Furniture
Specification, Programming

PROJECT TYPE

Office, Industrial

PROJECT SIZE

204,750 SF

COMPLETION DATE

2013

Workplace A+D was proud to work on another project with BE Aerospace (now Collins Aerospace) Co-located with Boeing's largest production facility and assembly operations, this new flexible-cell manufacturing and engineering site brought together multiple divisions of BE Aerospace including galleys, emergency oxygen systems and lavatories. Using planning guidelines and standards previously developed by Workplace A+D, this facility includes a 65,000 SF office area for 375 engineers and division management, as well as work areas though the production and assembly areas. A unique challenge on this project was the use of high-bay space for the office environment, with delivery of power and data from upper trusses with custom-designed overhead grid system. Semi enclosed spaces in the open plan for managers and conference rooms were designed for flexibility even with the challenge of local seismic codes.
